

# PLC Programming with STEP 7 and TIA

Know-how is the most important basis for reliable automation in feed and food production. To guarantee success, you need robust hardware components and powerful PLC programming.

This is why we use sophisticated SIMATIC products, which have been tried and tested by companies all over the world, for the realisation of your projects. Our specialists have many years experience and program in STEP 7 and TIA. And, we don't leave anything to chance in the planning stages: Our planning department creates the required circuit diagrams and defines the in/outputs for the subsequent process automation.

## What makes us stand out

- We use Siemens hardware components
- The components used meet the demands of robust industrial applications and global availability
- We program with STEP 7 and TIA
- Version tracking with Versiondog
- We have our own in-house planning department

## Advantages

- In-house planning team with decades of experience in the feed and food industry
- Internationally tried-and-tested products (SIMATIC, STEP 7/TIA)
- Consistent system integration in the fhalcon® Software Suite
- User interface in the relevant language
- Highest degree of production availability thanks to the 24h availability of service and maintenance via remote access (VPN)

Naturally, PLC programming from Högemann is seamlessly integrated into the fhalcon® Software Suite. Our Manufacturing Execution System enables a highly-automated production from A to Z. Get in touch for more information!
